# A Study of Indian Woman's Acceptance of Digital Financial Transactions with Specific Survey of Woman in Education Field

Dr. (CA) Shubhada Apte, Sanskar Sarjan Education Society's D.T.S.S. College of Commerce, Research guide. CA Rajul Murudkar, Research scholar, Sanskar Sarjan Education Society's D.T.S.S.College of Commerce, University of Mumbai.

Abstract:- Finance and Technology together has produced several FinTech companies and increased the usage of digital transactions over the period. India has followed the advanced nations and now has witnessed tremendous growth in the usage of digital modes for doing financial transactions. Covid-19 pandemic and the resultant restrictions like social distancing and the threat of spread of virus have led to more usage of digital modes over cash transactions. Before pandemic when Modi government announced digital India move the pace of usage was still on the lower side which got a boost due to pandemic restrictions. Typically, Indian woman seem to be dependent upon her male counterpart or the male member of the family to do the financial transactions like investments or fund transfer etc. Additionally, the residential location like rural or urban also makes differencein terms of usage as the area has its own challenges. This study uses primary data to check whether educated and earning women believe in the usage of digital methods for financial transactions and agrees that these modes are beneficial. Also, whether the residential location has any impact overthe usage.

**Keywords:-** Location, Benefits of digital modes, Digital methods.

### I. INTRODUCTION

Educated and employed people are assumed to have knowledge of financial transactions. Majority of them can decide the distribution of savings and spending and effectively use their earnings. Further, the technology can help to save time and energy and the resources to implement the decisions. The objective of this study is to find out women teachers' view towards the usage of technology in doing financial transactions. Various questions like whether the women prefer digital methods to pay day to day requirements or they are still dependent upon traditional currency. Further, the residential location has any role to play in the choice of method would be checked. Covid-19 pandemic and its restrictions on account of restricting the spread of virus require people to shift to digital modes over traditional cash and cheque, as though banks were

functional during the pandemic but lot of hurdles like time limit, waiting period, minimum staff and lot of fear in mind caused the people to adopt to new methods for doing financial transactions.

# II. CONCEPTUAL FRAMEWORK

Usage of digital methods and performing financial transactions require knowledge hence, only educated people and those having access to electronic devices is the target audience for this study. Further, it's a normal observation that male members of the society are more active in terms of making financial transactions and decisions associated with the same. Further, they are more exposed as compared to female members to the latest technology and electronic devices. That is the reason why this study has concentrated on seeking the response from women teachers.

Digital methods – The electronic devices such as mobiles, computers, laptops etc. along with net banking facility, digital wallets, Unified Payment Interface, mobile applications etc. facilitate digital receipts or payments. Moreover, buying apparels, house hold requirements, grocery etc. isalso possible through these channels. Travel booking or even reserving movie tickets through electronic options have caught public attention.

Benefits of digital modes – The question arises is to why to use electronic or digital modes over traditional methods of making financial transactions. Are these options really beneficial and how. This study tries to find out answers to these questions from women teachers. If educated and salaried class of women prefer these options then definitely one can assume it as a beneficial option.

- > Objectives:
- To check women teachers' response towards the benefits of digital financial transactions.
- To identify impact of residential location on the usage of digital methods.

# III. RESEARCH METHODOLOGY

We requested fifty women teachers who are employed with various colleges to fill the structured questionnaire and the responses were collected. The same were analyzed by using SPSS statisticaltools. Various secondary data sources have also been referred to for the purpose of this study. Secondary data sources such as news articles, news reports, RBI site etc. have

been referred to understand the latest information about the subject.

## ➤ Analysis:

Respondents' Profile: Total 50 women teachers from various colleges from various locations were approached to get the response to the structured questionnaire.

Table 1:- Consolidated Table for Preference of Transaction Mode

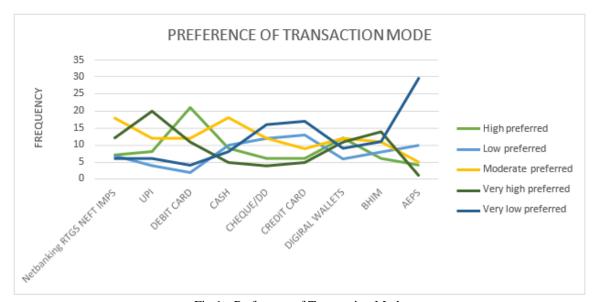

Fig 1:- Preference of Transaction Mode

It has been observed that the respondents prefer UPI option the most followed by debit card for making electronic payments. Whereas people still prefer cash which means target of complete cashless economy is still as dream. Further, credit card, though advertised by the service providers most in terms of reward points, loans etc. the respondents have shown lower inclination towards the same and AEPS looks like non preferred option for the respondents. It also shows that the female teachers need to be educated towards digital wallets and mobile apps like BHIM and other net banking options since, the usage found minimal in those cases.

Consolidated table showing women teachers' preference of mode of payment for various financial transactions:

Table 7:- The respondents' approach towards benefits arising from usageof digital mode of transactions over manual transactions:

Above table shows that the female teachers have strongly agreed in the majority cases, and find digital mode of transactions suitable over manual transactions in terms of the benefits they offer. Only in case of auto debit instructions for utility bill payments, we have received neutral responsefrom the target group of respondents.

|                                 | Thane         | 1                      | 4             | 5  |
| Total                           |               | 13                     | 37            | 50 |

Table 8:- Comparison of usage vis-à-vis location Crosstabulation

### IV. CONCLUSION

The target respondents were asked about the most preferred option out of the given set of alternatives like UPI, RTGS, NEFT, debit and credit card, Bhim, AEPS, cash and cheque and theirchoice was analyzed. It has been observed that women teachers prefer UPI and debit card but giventhe choice they will still vote for the cash option. When we compared the list of benefits, we foundthe agreement from the respondents towards the benefits. Further, the location wise response deferred. Women staying in Mumbai area were found better versed with the usage of digital options as compared to those staying in Ratnagiri and Thane. There is further scope available to study the women associated with different category of

employment, self-employed and home makers. Also comparison can be made by involving women from different areas to check their awareness and usage.
