Abstract:- Medical Store is an website design developed for Medical shops. This system is a field concerned with purchasing and dealing drugs, maintaining their force, generating deals checks and generating monuments of data about drugs. It requires further time and trouble when all procedures are performed manually. Medicine Store is a real- time design which will be useful for the person who have no time to spend in an offline store. To order the demanded drug online first, the client should give the obligatory details for enrollment purpose. The demanded fields for enrollment are the Name of the client, correspondence id, phone number, username, Password, confirm Password. After, the enrollment process username and word is necessary for logging into your account. Also the client can OTP the demanded drug. After validation of order also we can cancel the order.

Keywords:- Medical; Medicine; Customer.

I. INTRODUCTION

We're making a database for a medical store to manage their data. We'll manage their store, guests etc. Currently we see there are a lot of drugs and medical stores find far and wide in which there are a lot of drugs and it's veritably delicate to save their record. For this we're giving them a database so that they must know how important and which kind of drugs they have. They can also put the slip's record through this database. As we've described over in the description that we're giving a database, so that they may save the record in every way. When we gave the database to the medical store holders, they will be suitable to save the result of the drug that have in their stores. Also, they can make the bills. The medical store operation system can give ease to the medical stores in managing their paper work, payment details and force online along with reacquiring them. We also give the online delivery of the Medicine for endless client. It helps those client who are sells drug every month like BP, Diabetes, Thyroid. To give home delivery is veritably useful for old person.

II. LITERATURE REVIEW

A. Medical ERP

Medical pharmacy management software helps Pharmacists manage their pharmacies effectively. It also helps Pharmacists manage purchases, returns, sales, returns, short sales, customers, and the overall business. Enterprise Resource Planning (ERP) is a type of software that companies use to manage their day-to-day business activities such as accounting, procurement, project management, risk management and compliance, and supply chain operations. Pharmacy management software is fully automated, reducing the burden on pharmacists and increasing sales. ERP also supports healthcare companies

with real-time patient needs, data, and test reports to ensure optimal results. Additionally, optimizing various diagnostic systems, electronic medical records, and patient communication systems is the biggest benefit of ERP for healthcare. ERP helps streamline caregiver access to all aspects of patient data, from imaging to vaccinations. Patients also benefit from accessing and better managing their data, which is often centralized in a patient portal[1].

III. PROBLEM STATEMENT

Provides the analytic installations ashore on bright factors. Agnet as Medical Store, Stocks, deals, Charges. Medical Store Management System additionally administer the druggies capacity online anatomy Deals details, Charges details,Medical Store. It advance all the advice of Medicine, druggies, Deals etc. Administer the advice of Medicine. Shows the advice and description of the Medical Store Stocks. To access capability of managing the Medical Store Medicine. It deals with the ecology advice and deals of Deals. Administer the advice of Medical Store. Editing,

abacus and streamlining of records is bettered which after-effects in able ability operation of Medical Store data.

IV. METHODOLOGY

The first step is to completely dissect the conditions and conditions of the medical store.This consists of information the cutting-edge internal device, associated pain factors, and concerning the wished features and capability of the MSMS. Primarily based on the situation analysis, an in depth device design is created. This includes designing the database shape, person interfaces, information flows, and systembackbone.The layout should meet the unique situations of the medical keep and include tough running, Fingers on patterns. Substantiation grounded development of MSMS started out for the duration of this period. Software program formulators use system design as a design to provide the vital modules, features, and capabilities of the system. This can contain programming, integration with divagation and trying out of person elements. As soon as the improvement is entire, thorough testing of the machine is executed.

This includes unit testing of character modules, integration testing to make certain right verbal exchange among modules, and system testing to validate the general capability and overall performance of the MSMS. Bugs and issues are connected and fixed during this phase. After a hit checking out,the MSMS is published in the scientific keep terrain. This includes putting in the important address, configuring the software, and configuring the system in step with store situations. Statistics from the contemporary fee machine may want to be migrated to the brand new device all through this era. As soon as the MSMS is functional, ongoing conservation and Guide will be confident. This includes normal updates and fixes, resolving sensitive troubles and queries, and icing the device stays comfortable and reliable. Continuous development and development can be made grounded on feedback from people who smoke and changing situations.
