Abstract:- Salon management can be seen as one of the easy and secure solutions for managing the difficult non-computerized workload without any papers needed. Salon management helps a lot of owners nowadays to easily keep a count of their work and also the employees salary with the help of computerized application. In this we will show you how this application works and help the owners of many salons with their salon management related things. Our application is user friendly and easy to use with different tabs and categories. This application help you keep your work sorted and also secured from any unauthorized personnel.

Keywords:- Salon Management, Application, Employees, Computerized.

I. INTRODUCTION

Today many of the salons are using computerized application to keep tabs on their work without any wastage of papers and piles of files stocked up in their cupboards or drawers. Our application TheLook is the one which help these salon owners to easily do their day to day work entries and management through this very user friendly application. TheLook provides you with authorized login, where only people with registered user name and password are allowed to go through all the data stored in the application. It contains various categories after logging in such as Customer count, Stock count, Customer id, Employee count, Employee salaries, Product Sold, Total Profit made, Concessions.

The Look provides you with authorized login only, the admin and the registered id's will be the only ones who can be allowed to make entries and changes in the data of the application. This concept is not entirely new but is evolving entirely new to the world. This app is making a major role in making customers loyal to such managed salons and customers always love to visit such maintained salons.

➤ Objectives of the Application

To provide the salon owners with sophisticated and simple management of all the entries that has to be done in order to handle the salon management. With secured login so that no other unauthorized personnel with malicious intent can get into your application without the admin's permission to go through.

• Goals

- ✓ A very simple and easy user interface.
- ✓ Security provided for no unauthorized personnel.
- ✓ Very systematic and sorted data storage.

II. LITERATURE REVIEW

According to ISO 9000:2000 management can be referred as a set of interrelated elements to establish policy and objectives, and to achieve those objectives.

Salon management through computerized systems are fast and reduces data anomalies, data redundancy. Computerized systems reduces paper usage and generates information sophisticatedly.

III. PROPOSED SYSTEM

Running a salon can be hard. TheLook makes it easier with user-friendly salon management software that you will love. Manage stock, plus run point of sale and marketing. Then take your business to the next level with real-time and detailed reporting of employees at what time they come to the salon and when they leave the salon and same for the customers who come their and visit the salon.

A. Secure Login

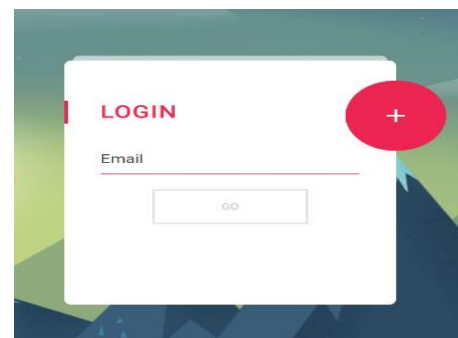

Fig 1

In this you can securely login. Admin can set and reset passwords for the application and can give access to only the registered ones. Our Login page will be seen as above figure provided.

You will firstly enter the email/username for your first tab of login process which if right will be recognized and will be forwarded to the password tab for your secured authorized entry only.

B. For New Registration

Now for your first time/new registration you will insert your desired email/username, select a particular password, and a color just for your like. This will be done under the Admin as only the admin can allow you to register and give you the permission to access the data inside the application.

C. Working of the System

Working of this application is quite simple, secure and sophisticated in itself which will help the owner manage all the salon work quite easily First of all the admin will login to the system by entering it's username and password in the login page, then the admin will get access to all the functions and feature of the application. The admin can now enter the data that has to be recorded into the application, Customer's id, address, contact number, etc. Admin can also insert the information of the Staff members working in the salon. Here then admin can allow the staff members to register in the application so that when the admin is not around they can themselves can login and enter the entries and sales made everyday.

New staff members can register into the app by registering by filling in the registration form. New member needs to enter a username, password into he system to make a new login id so it is convenient for them to log into the system. Now regarding to the architecture explained in detailed later on allows the user to enter data record and calculate the sums/sales easily by using the application. The architecture is now explained in depth in later section of the paper.

D. Architecture

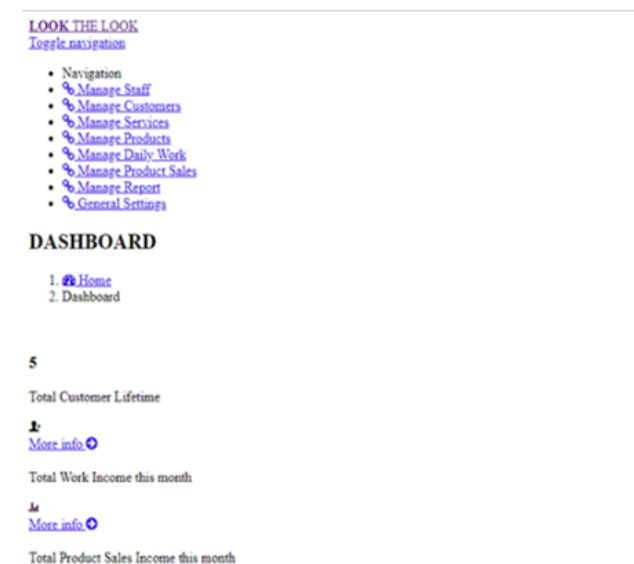

Fig 2

➤ **Home**

- Total Customers Lifetime
- Total Work Income per month
- Total Products Sales

- **Total Customers Lifetime**

This section will have the record of total number of customers that came to the salon from when it was established.

- **Total Work Income per month**

Contains the earnings earned per month, summed up and calculated correctly.

- **Total Products Sales:**

Will contain all the products sold by the staff members till the date, up-to-date.

➤ **Dashboard**

- Manage Staff
- Manage Customers
- Manage Services
- Manage Products
- Manage Daily Work
- Manage Product sales
- Manage Report
- General Settings

- **Managing Staff**

In this section of the application, the number of staff members working currently in your salon will be registered with their names, contact numbers, addresses, birth dates and few of their personal details.

- **Managing Customers**

Is also a very important task, the time they made an appointment at the salon, their names, Contact numbers for future offers messages, and addresses(only if the customer is comfortable in sharing their address with us).

- **Products Management**

This is the section where all the products coming in and that have been bought by the owner will be recorded and stored here for any future purposes.

- **Manage Daily Work**

In here the count of customers will be recorded as well as the total amount of money earned throughout the whole day. All that data will be stored in this section of the application.

- **Products Sold**

In here the customers who wanted few beauty products for themselves, sold are recorded in this section which tells you about the product sold to which customer by which staff of that specific salon.

- **Report Management**

Here the time when the staff members came will be recorded. In case any staff had to leave the salon they have to enter the time they leave the salon in this section which makes it very convenient for the owner to manage their staff members salary raises or salary cuts depending on their time dedicated to the salon.

- *General Settings*

This section will be only allowed to the owner/admin. This will contain all the earnings, staff member's salaries, each staff member's concessions which depends on the number of products they sold and how much profit they did to the salon by bringing in more customers and earning tips from the customers.

IV. CONCLUSION

We would like to conclude our application by saying that computerized management of the salon can be very helpful and user friendly that helps them to easily manage their daily work and keeping a track of all the activities taking place in their salon. These applications also provide you with security from any unauthorized personnel which is very helpful as no one except the admin can alter the data of your application.
